

Scoring Rubric: Health Disparities Award

Script Your Future Medication Adherence Team Challenge Scoring Rubric: Health Disparities Award

There are four focused activity awards.

- **Health Disparity/Under-represented Community Outreach Award**
- Creative Interprofessional Team Event Award
- Media/Communications Outreach Award
- Tech Innovation Award

For the *Health Disparities Event Award*, Teams were asked to answer “why” they selected their population focus. Reviewers should look for community health indicators, researched awareness of the population health concern, and other markers demonstrating a connection to the selected population.

Focused activity award applications, which should be no more than three pages, will be reviewed separately from the national award applications. There are five areas for scoring applications, weighted as follows:

Population Target/Media Goals	20 points
Program Intervention	25 points
Scalability	20 points
Lessons Learned	10 points
Outcomes Measured	25 points
TOTAL	100 points

Applications will be graded using a scale from 1-10 (with 10 representing the highest quality/points). Reviewers will input the score in each category using the range of 1-10. The worksheet will automatically multiply and populate the spreadsheet, totaling the final score.

Scoring Rubric: Health Disparities Award

Overall Influence	<i>Non-Applicable (0 points)</i>	<i>Fair (1 -4 points)</i>	<i>Good (5-7 points)</i>	<i>Excellent (8-10 points)</i>
Population Target Does the Team present a strong methodology for the selection of its population of focus?	This proposal does not describe a methodology for the selection of its population.	This proposal describes a slightly a methodology for the selection of its population.	This proposal provides a moderately a methodology for the selection of its population.	This proposal describes a strong, thoughtful methodology for the selection of its population.
Program Intervention Does the Team report a customized set of activities for the population of focus, matched to the needs of that population?	This proposal does not describe customized activities for the population of focus, matched to the needs of that population.	This proposal describes slightly customized activities for the population of focus, matched to the needs of that population.	This proposal provides moderately customized activities for the population of focus, matched to the needs of that population.	This proposal describes highly customized activities for the population of focus, matched to the needs of that population.
Scalability Does this effort have a lasting impact on the community and can another group replicate its success?	This proposal does not describe a lasting impact on the community and it can NOT be replicated.	This proposal describes a moderate, lasting impact on the community and can NOT be replicated.	This proposal describes a moderate, lasting impact on the community and CAN be replicated.	This proposal describes a strong, lasting impact on the community and CAN be replicated.
Lessons Learned Does the Team offer thoughtful solutions to the barriers encountered through the targeted effort?	This proposal does not describe barriers or solutions to any barriers encountered through the effort.	This proposal slightly describes solutions sought by the Team when barriers were encountered.	This proposal moderately describes solutions sought by the Team when barriers were encountered.	This proposal very effectively describes solutions sought by the Team when barriers were encountered.
Outcomes Measured Does the Team report data to support the measured outcomes of its activities?	This proposal does not report data to support measured outcomes of its activities.	This proposal reports 1-3 data points from the recommended list or self-designed data.	This proposal reports 4-8 data points from the recommended list or self-designed data.	This proposal reports 9+ data points from the recommended list or self-designed data.
